# Chapter 2. An Introduction to Forwards and Options

- § 2.1 Forward contracts
- § 2.2 Call options
- § 2.3 Put options
- § 2.4 Summary of forward and option positions
- § 2.5 Problems

- ► The features and quantity of the asset to be delivered.
- ► The delivery logistics, such as time, date, and place
- ► The price the buyer will pay at the time of delivery.

- Futures contracts are the same as forwards in principle except for some institutional and pricing differences. We will study future contracts in Chapter 5
- 2. A forward contract requires no initial payment or premium

- ► The features and quantity of the asset to be delivered.
- ► The delivery logistics, such as time, date, and place.

$$Long = buy$$
  $short = sell$ 

Definition 2.1-2 Payoff for a contract is its value at expiration. In particular, for forward contracts,

Payoff for Long forward = Spot price at expiration - Forward price

Payoff for Short forward = Forward price - Spot price at expiration

Remark 2.1-2 Payoff and profit (net payoff) are the same for forward contracts because there is no initial payment – premium.

#### Example 2.1-1 S&R (special and rich) index:

Today: Spot price = \$1,000 6-month forward price = \$1,020

In six months at contract expiration: Spot price = \$1,050.

What are the payoff of long/short forward?

Solution

Long position payoff = \$1,050 - \$1,020 = \$30,

Short position payoff = \$1,020 - \$1,050 = (\$30).

7

#### Example 2.1-1 S&R (special and rich) index:

Today: Spot price = \$1,0006-month forward price = \$1,020In six months at contract expiration: Spot price = \$1,050.

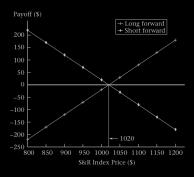

What are the payoff of long/short forward?

Solution.

Long position payoff = \$1,050 - \$1,020 = \$30,

Short position payoff = \$1,020 - \$1,050 = (\$30).

## Payoff diagram for a forward price = \$1,020

## Forward versus outright purchase

We will see this through the following example:

Example 2.1-2 S&R 6-month forward contract with a zero-coupon bound (e.g., Treasury bills). The 6-month interest rate is 2%. Spot price today = \$1,000.

g

 $1,000 \text{ today is worth } 1,000 \times 1.02 = 1,020 \text{ in } 6 \text{ months}$ .

Outright purchase<sup>2</sup> is equivalent to forward + bond<sup>3</sup>

because

Payoff of forward+bond = Spot price at expiration 
$$-\$1,020$$
 +  $\$1,020$ 
Forward payoff Bound payoff

= Spot price at expiration

= Payoff of outright purchase

<sup>&</sup>lt;sup>2</sup>It is also called long physical index.

<sup>&</sup>lt;sup>3</sup>Invest \$1,000 to bond for 6 month and enter long position of forward contract at the same time.

 $1,000 \text{ today is worth } 1,000 \times 1.02 = 1,020 \text{ in } 6 \text{ months}$ .

Long forward is equivalent to borrow-to-buy<sup>4</sup>

because

= Payoff of long forward.

<sup>&</sup>lt;sup>4</sup>Borrow money (\$1,000) to outright buy physical index and at expiration pay back the money (\$1,020).

## Type of settlement

- ► Cash settlement: less costly and more practical
- Physical delivery: often avoided due to significant costs

#### Example 2.1-3 Consider the S&R index with the forward price \$1,020.

- ▶ Suppose that the S&R index at expiration is \$1,040.
- The long position has a payoff of \$20.
- ► Similarly, the short position loses \$20.

With cash settlement, the short simply pays \$20 to the long, with no transfer of the physical asset, and hence no transaction costs. It is as if the long paid \$1,020, acquired the index worth \$1,040, and then immediately sold it with no transaction costs.

- Suppose that the S&R index price at expiration had instead been \$960
- ► The long position would have a payoff of -\$60
- ► The short would have a payoff of \$60.

## Type of settlement

► Cash settlement: less costly and more practical

► Physical delivery: often avoided due to significant costs

Example 2.1-3 Consider the S&R index with the forward price \$1,020.

- Suppose that the S&R index at expiration is \$1,040.
- I he long position has a payon of \$20.
- Similarly, the short position loses \$20.

With cash settlement, the short simply pays \$20 to the long, with no transfer of the physical asset, and hence no transaction costs. It is as if the long paid \$1,020, acquired the index worth \$1,040, and then immediately sold it with no transaction costs.

- Suppose that the S&R index price at expiration had instead been \$960.
- ▶ The long position would have a payoff of -\$60.
- ► The short would have a payoff of \$60.

## Type of settlement

► Cash settlement: less costly and more practical

► Physical delivery: often avoided due to significant costs

Example 2.1-3 Consider the S&R index with the forward price \$1,020.

- Suppose that the S&R index at expiration is \$1,040.
- I he long position has a payon of \$20.
- Similarly, the short position loses \$20.

With cash settlement, the short simply pays \$20 to the long, with no transfer of the physical asset, and hence no transaction costs. It is as if the long paid \$1,020, acquired the index worth \$1,040, and then immediately sold it with no transaction costs.

- Suppose that the S&R index price at expiration had instead been \$960.
- ▶ The long position would have a payoff of -\$60.
- ► The short would have a payoff of \$60.

## Type of settlement

- ► Cash settlement: less costly and more practical
- ► Physical delivery: often avoided due to significant costs

#### Example 2.1-3 Consider the S&R index with the forward price \$1,020.

- ► Suppose that the S&R index at expiration is \$1,040.
- ► The long position has a payoff of \$20.
- ► Similarly, the short position loses \$20.

With cash settlement, the short simply pays \$20 to the long, with no transfer of the physical asset, and hence no transaction costs. It is as if the long paid \$1,020, acquired the index worth \$1,040, and then immediately sold it with no transaction costs.

Suppose that the S&R index price at expiration had instead been \$960.

<sup>►</sup> The long position would have a payoff of —\$60.

<sup>►</sup> The short would have a payoff of \$60

## Type of settlement

► Cash settlement: less costly and more practical

Physical delivery: often avoided due to significant costs

#### Example 2.1-3 Consider the S&R index with the forward price \$1,020.

- ► Suppose that the S&R index at expiration is \$1,040.
- ► The long position has a payoff of \$20.
- Similarly, the short position loses \$20.

With cash settlement, the short simply pays \$20 to the long, with no transfer of the physical asset, and hence no transaction costs. It is as if the long paid \$1,020, acquired the index worth \$1,040, and then immediately sold it with no transaction costs.

<sup>▶</sup> Suppose that the S&R index price at expiration had instead been \$960...

<sup>▶</sup> The long position would have a payoff of -860.

<sup>►</sup> The short would have a payoff of \$60.

## Type of settlement

- ► Cash settlement: less costly and more practical
- ▶ Physical delivery: often avoided due to significant costs

#### Example 2.1-3 Consider the S&R index with the forward price \$1,020.

- ► Suppose that the S&R index at expiration is \$1,040.
- ► The long position has a payoff of \$20.
- ► Similarly, the short position loses \$20.

With cash settlement, the short simply pays \$20 to the long, with no transfer of the physical asset, and hence no transaction costs. It is as if the long paid \$1,020, acquired the index worth \$1,040, and then immediately sold it with no transaction costs.

<sup>▶</sup> Suppose that the S&R index price at expiration had instead been \$960.

<sup>►</sup> The long position would have a payoff of —560.

<sup>►</sup> The short would have a payoff of \$60.

## Type of settlement

- ► Cash settlement: less costly and more practical
- ▶ Physical delivery: often avoided due to significant costs

#### Example 2.1-3 Consider the S&R index with the forward price \$1,020.

- ► Suppose that the S&R index at expiration is \$1,040.
- ► The long position has a payoff of \$20.
- ► Similarly, the short position loses \$20.

With cash settlement, the short simply pays \$20 to the long, with no transfer of the physical asset, and hence no transaction costs. It is as if the long paid \$1,020, acquired the index worth \$1,040, and then immediately sold it with no transaction costs.

<sup>▶</sup> Suppose that the S&R index price at expiration had instead been \$960.

<sup>►</sup> The long position would have a payon of −500.

<sup>►</sup> The short would have a payoff of \$60.

## Type of settlement

- ► Cash settlement: less costly and more practical
- ▶ Physical delivery: often avoided due to significant costs

#### Example 2.1-3 Consider the S&R index with the forward price \$1,020.

- ► Suppose that the S&R index at expiration is \$1,040.
- ► The long position has a payoff of \$20.
- ► Similarly, the short position loses \$20.

With cash settlement, the short simply pays \$20 to the long, with no transfer of the physical asset, and hence no transaction costs. It is as if the long paid \$1,020, acquired the index worth \$1,040, and then immediately sold it with no transaction costs.

Cash settlement in this case entails the long paying \$60 to the short

## Type of settlement

- ► Cash settlement: less costly and more practical
- ▶ Physical delivery: often avoided due to significant costs

#### Example 2.1-3 Consider the S&R index with the forward price \$1,020.

- ► Suppose that the S&R index at expiration is \$1,040.
- ► The long position has a payoff of \$20.
- ► Similarly, the short position loses \$20.

With cash settlement, the short simply pays \$20 to the long, with no transfer of the physical asset, and hence no transaction costs. It is as if the long paid \$1,020, acquired the index worth \$1,040, and then immediately sold it with no transaction costs.

- ► Suppose that the S&R index price at expiration had instead been \$960.
- ▶ The long position would have a payoff of -\$60
- ► The short would have a payoff of \$60

## - Type of settlement

- ► Cash settlement: less costly and more practical
- ▶ Physical delivery: often avoided due to significant costs

#### Example 2.1-3 Consider the S&R index with the forward price \$1,020.

- ► Suppose that the S&R index at expiration is \$1,040.
- ► The long position has a payoff of \$20.
- ► Similarly, the short position loses \$20.

With cash settlement, the short simply pays \$20 to the long, with no transfer of the physical asset, and hence no transaction costs. It is as if the long paid \$1,020, acquired the index worth \$1,040, and then immediately sold it with no transaction costs.

- ► Suppose that the S&R index price at expiration had instead been \$960.
- ▶ The long position would have a payoff of -\$60.
- ► The short would have a payoff of \$60.

# Type of settlement

- ► Cash settlement: less costly and more practical
- ▶ Physical delivery: often avoided due to significant costs

#### Example 2.1-3 Consider the S&R index with the forward price \$1,020.

- ► Suppose that the S&R index at expiration is \$1,040.
- ► The long position has a payoff of \$20.
- ► Similarly, the short position loses \$20.

With cash settlement, the short simply pays \$20 to the long, with no transfer of the physical asset, and hence no transaction costs. It is as if the long paid \$1,020, acquired the index worth \$1,040, and then immediately sold it with no transaction costs.

- ► Suppose that the S&R index price at expiration had instead been \$960.
- ▶ The long position would have a payoff of -\$60.
- ► The short would have a payoff of \$60.

# Type of settlement

- ► Cash settlement: less costly and more practical

#### Example 2.1-3 Consider the S&R index with the forward price \$1,020.

- ► Suppose that the S&R index at expiration is \$1,040.
- ► The long position has a payoff of \$20.
- ► Similarly, the short position loses \$20.

With cash settlement, the short simply pays \$20 to the long, with no transfer of the physical asset, and hence no transaction costs. It is as if the long paid \$1,020, acquired the index worth \$1,040, and then immediately sold it with no transaction costs.

- ► Suppose that the S&R index price at expiration had instead been \$960.
- ▶ The long position would have a payoff of -\$60.
- ► The short would have a payoff of \$60.

#### Credit risk

All derivatives contracts have **credit risk**, which is the possibility that the counterparty who owes money fails to make a payment.

► Major issue for over-the-counter (OTC) contracts

Credit check Credit protections such as collateral and bank letter of credit

Exchange guarantees transactions, requires collateral

#### Credit risk

All derivatives contracts have credit risk, which is the possibility that the counterparty who owes money fails to make a payment.

► Major issue for over-the-counter (OTC) contracts

Credit check Credit protections such as collateral and bank letter of credit

► Less severe for exchange-traded contracts

Exchange guarantees transactions, requires collateral
